PROFILE SUMMARY

Final-year Software Engineering student at Sindh Madressatul Islam University with experience in UI/UX design, data analysis, and machine learning. Skilled in Python, data visualization, machine learning, and developing end-to-end applications. Combines a design-focused approach to usability with a data-driven problem-solving mindset, with hands-on experience building analytical dashboards, ML solutions, and user-centered digital experiences.

EDUCATION

Sindh Madressatul Islam University (SMIU) Sept 2023 – Expected 2027
Bachelor of Science (Software Engineering) — Final Year Student

Govt. College for Women, Shahrah-e-Liaquat 2023
Intermediate — Pre-Engineering

F.C. Moriswala Girls Secondary School 2021
Matriculation —Science(Biology)

PROJECTS

Late Delivery Risk Predictor | *Python, Scikit-learn, XGBoost, Flask, SHAP*

- Compared Random Forest, XGBoost, and LightGBM models on 180,000+ real supply chain orders to predict late delivery risk, selecting XGBoost for its balance of accuracy (70.7%) and interpretability.
- Engineered features and eliminated data leakage to ensure the model reflects genuinely deployable, real-world performance rather than inflated accuracy.
- Integrated SHAP explainable AI to surface the key factors behind each prediction and generate actionable, factor-specific recommendations.
- Built a full-stack web application (Flask backend + custom HTML/CSS/JavaScript frontend) for real-time, interpretable risk predictions.

Steam Games Data Analysis | *Python, Pandas, Streamlit, Plotly*

- Analyzed 27,000+ Steam games to uncover trends in pricing, genre popularity, player engagement, and developer performance.
- Engineered custom metrics, including a satisfaction score and value-for-money score, to derive insights not present in the raw dataset.
- Identified a 'Hidden Gems' segment of highly-rated but low-visibility games using custom filtering logic.
- Built an interactive Streamlit dashboard with live filtering by genre, price, and release year for dynamic data exploration.

Donation Routing System — Website UI/UX Design | *Figma*

- Designed the complete UI/UX of a donation routing website, covering the user journey from donor onboarding to donation tracking.
- Created user flows, wireframes, and high-fidelity prototypes with a consistent visual system.
- Focused on usability, visual hierarchy, and a clear user experience across the platform.

UI/UX Design Projects — 35+ Screens | Figma

- Designed 35+ individual UI screens across different concepts and use cases.
- Explored diverse layouts, navigation patterns, visual hierarchies, and interaction flows.
- Applied UI/UX principles to create clean, user-centered, and visually consistent interfaces.

PROFESSIONAL CERTIFICATIONS

- IBM Data Analyst Professional Certificate – Coursera
- UI/UX Design – Bano Qabil
- Data Analysis (In Progress, expected completion soon) – NexSkill

TECHNICAL SKILLS

Programming Languages: Python, HTML, CSS, JavaScript

Databases: MongoDB, PostgreSQL
Data Analysis & Machine Learning: Pandas, Scikit-learn, XGBoost, SHAP, Matplotlib, Seaborn
UI/UX Design: Figma, Wireframing, User Flows, Prototyping
Tools & Technologies: Git & GitHub, VS Code, Flask, Jupyter, Google Colab, Jira, Streamlit
Additional Exposure: Excel, Power BI, SQL, AI coding tools (ChatGPT, Claude)
